PROFILE SUMMARY

Self-taught Full Stack Developer with practical experience building real-world web applications. Comfortable across the stack and quick to pick up new tools as needed. Committed to delivering results in a professional role.

PROJECTS

Laptop Store - E-Commerce Web Application

GitHub Live Link

Developed an **advanced e-commerce platform** featuring RESTful API-based services and user-friendly functionalities like OTP-based authentication, social media login, and dynamic product management.

- **Dynamic Features:** Image cropping/resizing, advanced filtering/sorting, and **real-time stock updates**.
- **Admin Panel:** Comprehensive **user, product, and category management** with detailed **sales reports**.
- **Payment Integration:** **Razorpay gateway** and **error handling for failed payments**.
- **Referral System:** Fully implemented user **referral rewards** program.

Blogging Platform

Backend GitHub Frontend GitHub

Developed a feature-rich blogging platform following **Clean Architecture** principles, utilizing the MEAN stack and TypeScript for real-time, interactive functionality.

- **Advanced Search:** Utilized **Trie data structure** for optimized blog search functionality.
- **User Features:** Implemented blog bookmarking, comments, likes, and CRUD operations.
- **Authentication:** Secure user authentication using JWT and **bcrypt** for password hashing.
- **Modern UI:** Created a **responsive frontend** using **Angular** and **Tailwind CSS**.
- **RESTful API:** Designed scalable backend APIs for user operations, blog content, authentication.

MINI PROJECTS

Cloned **Netflix** and **SpaceX** websites

Todo App:

GitHub

A task management application built with Angular, allowing users to add, edit, and delete tasks.

TECHNICAL SKILLS
